

Congratulations, you have completed **Hacking WEP/WPA/WPA2 Wi-Fi Networks Using Kali Linux 2.0** course

I hope this course improved your skills in Ethical Hacking.

Now you are able to:

- Network security testing
- Setup your Kali Linux environment properly
- Gather any access point information without having the key
- You will be able to deal with a lot of Kali Linux tools
- Carry out a number of attacks without having the key
- Crack any WiFi encryption using a number of methods
- Protect your WiFi network against all the attacks
- Learn ARP Poisoning
- Launch ARP Poisoning attack
- Launch (Man in the middle attack)
- Gain access to any client account in the WiFi network
- Detect ARP Poisoning (MITM) attack to protect yourself against it

This course will keep up to date.

You will get special discounts for all my future courses on Udemy.

Get my Full WiFi Hacking course for only 10\$ instead of 100\$ from this [LINK](#)

And excuse me if my English language wasn't good enough, I did my best to share with you what I learned from my career.

And lastly thank you for enrolling this course I hope to see you in my next course shortly.
